

SmartInfo Reader

On-demand Announcements for visually impaired Passengers (Text-to-speech)

This product enables transport authorities to better meet the needs of visually impaired customers. At the click of a button, the current content of the passenger sign is announced in a loud and clear voice. These spoken announcements are generated in the same place as the display texts (SmartInfo Controller) and are therefore always up to date.

- Text-to-speech solution that is fully integrated into the Trapeze environment
- Solution for master and slave signs of the SmartInfo family of products
- There are no additional components required at the sign except for the actual call button
- All cabling is internal
- Optimum protection against vandalism
- Volume can be adjusted according to location and time of day
- The design of the sign is not affected by the text-to-speech components
- Configuration changes are easily transmitted via radio
- Low maintenance: No servicing is required for the on-demand announcements
- The entire announcement text is read aloud
- Special route texts and general special texts can also be read out
- The loudspeaker is integrated into the button
- Easy retrofitting

SmartInfo Reader

TECHNICAL DATA

System requirements

- SmartInfo G3 or G4 with integrated SmartInfo Controller (SICU/CCM)
- Audio cable between master and slave units

Restrictions

- For PACOS (Passenger Coordination and Information System) stops individual adjustments are required
- Only one call can be processed at a time per master – slave group

Environmental conditions

- Same temperature range as for the SmartInfo signs (-25 °C to +40 °C)

Protection

- Call button: IP54
